

CARTA-SCIS Collaboration leads to FIU I-CAVE

Through a joint collaboration, FIU's College of Communication, Architecture and the Arts (CARTA) and the School of Computing and Information Sciences (SCIS) in the College of Engineering and Computing (CEC) established a timely new resource that is available to all FIU faculty and students, the Integrated – Computer Augmented Virtual Environment Lab (I-CAVE). By enabling creation of dynamic and interactive 2-D and 3-D visual environments with high-resolution graphics, the I-CAVE laboratory presents exciting new opportunities for FIU research projects, training initiatives, and data visualization.

virtual reality environments, and visualize project data. Among the many areas in which virtual research laboratories are integrated into studies at other research institutions are engineering (e.g., prototype design and manufacturing, building and construction), medicine/biomedical engineering (e.g., robotics), chemistry/biochemistry/material sciences (e.g., molecular modeling), and economics/social sciences (data simulation and visualization).

To expand capabilities to its full potential, the I-CAVE will be joined with a new digital fabrication facility in spring of 2017. This will create one of the few innovative facilities of its kind in the country as it will enable seamless transition between digital and analog information. The combined facilities will support diverse and innovative ways of using high end visualization equipment for digital fabrication as well as advancing fabrication technologies and tools through visualization. The lab will create numerous possibilities by presenting a myriad of the latest and newest technologies. These include Robotic Arms, 3D Scanning Devices, Laser Cutter, CNC Milling Machine, and 3D Printers for printing hard and flexible material as well as biological matter.

Extensive research was conducted to ensure that the technical capabilities of the I-CAVE are comparable to virtual reality facilities at other major research universities across the nation and overseas. FIU's I-CAVE is only the second Virtual Reality Environment laboratory in the State University System of Florida; the University of Central Florida's Institute for Training & Simulation is home to the first.

Located in a large (15' x 11') room in the Engineering and Computer Science (ECS) building on the MMC campus, the I-CAVE laboratory comprises five integrated LED flex screens, five digital video projectors, and a surround-sound system integrated to generate virtual reality experiences. High-end workstations generate multidimensional virtual worlds in images and sound. Hardware and software track movement in the space and coordinate with displayed images so that users, wearing 3D glasses, are immersed in the simulated environment, reacting and responding to computer-generated sensory stimuli with user-controlled feedback devices.

The I-CAVE introduces new research possibilities to FIU. With its state-of-the art imagery and user-friendly technology, the I-CAVE will enable FIU faculty and students to create simulations and models to test hypotheses, train researchers and project staff on research procedures and methodologies, conduct studies of

More information on the I-CAVE website is available at <http://icave.fiu.edu>. Information about the I-CAVE's workstation specifications, tracking system, capacity, and availability for research or training may be obtained by contacting Shahin Vassigh, PhD, Professor of Architecture and Associate Dean of Faculty Development, CARTA, by email (svassigh@fiu.edu) or telephone (305-348-3032) or Shu-Ching Chen, PhD, Eminent Scholar and Professor, SCIS, at Shu.Chen@fiu.edu or 305-348-3480.
