With climate change, habitat loss, and overharvesting threatening thousands of tropical plant species, FIU's International Center for Tropical Botany (ICTB) launched earlier this year with a great sense of urgency. The ICTB, a collaboration between FIU and the National Tropical Botanical Garden (NTBG), creates the infrastructure for multidisciplinary programs of research, education, and outreach in tropical botany, a field in which FIU has earned global recognition. In partnership with investigators around the world, FIU faculty affiliated with the ICTB are studying three critical areas:

- Processes generating and maintaining tropical plant diversity
- Products and services generated by tropical plants
- Conservation and management of threatened tropical plant species and habitats

Professor Baraloto at The Kampong

FIU was very fortunate to recruit Christopher Baraloto, Ph.D., to serve as Director of the ICTB. With an impressive track record of scholarly research in tropical botany, community ecology and conservation, and more than 80 peer-reviewed publications, Dr. Baraloto is exceptionally well qualified to lead the ICTB's large-scale research agenda. Prior to joining FIU, Dr. Baraloto spent eight years as a research scientist in Community Ecology at INRA-France.

Construction plans for the new building that will be home to the ICTB have been drafted. The building, to be located imme-

diately adjacent to The Kampong in Coconut Grove, will feature indoor and outdoor spaces specially designed to facilitate research and education in tropical botany. Consistent with the ICTB's mission, the overall design of the building and landscapes ensures minimal loss of existing native and specimen trees, improves the biodiversity of the site with native plant species, and integrates seamlessly into a botanic garden landscape.

The Kampong

The momentum and progress made in establishing this new center's research infrastructure are matched by the acceleration in research-related activities in tropical botany. Research collaborations involving the NTBG gardens in Hawaii are underway, and the ICTB and the NTBG are co-hosting a research symposium in Miami this fall. Collaborative research opportunities are being explored with tropical botany experts at several universities in China and expanded in Peru, Brazil, Colombia, East Africa, and the Caribbean. Remarkably, since January, FIU faculty affiliated with the ICTB have published more than 30 papers, including two in the *Proceedings of the Natural Academy of Sciences*, one in *Nature*, and one in *Current Biology*. As it hires additional faculty, cultivates global research partners and intensifies its collaborative research, and moves its operations into dedicated, state-of-the-art space, the ICTB is poised for preeminence in the field of tropical botany.
